Toughened Curved Glass

Glasshape Specialist Glass Products
May / June 2009

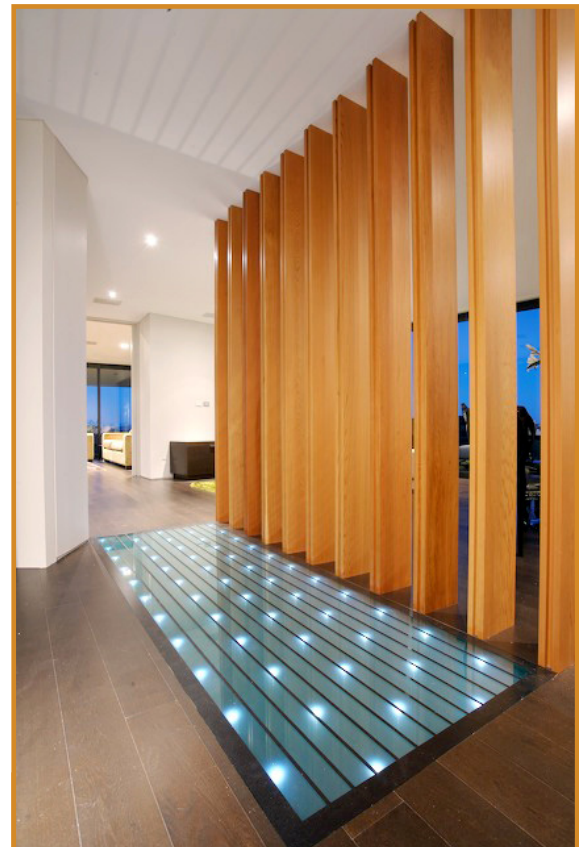

Dear Client,

The houses pictured in this issue demonstrate yet again, what a masterpiece these projects can end up when some of our Specialist glass products are included! A simply stunning curved bathroom window offering unrestricted views over the harbour. Gently flowing curved frameless balustrading, fitting in with the general feeling of space and freedom.

The low iron toughened glass pool fencing offers not only strength and security, but is also virtually unnoticeable. Congratulations to the architect and builder who knew this result was possible.....with the input of Glasshape[®], sky is the limit!

The pictures on the right here, shows what can be achieved using Glasshape[®] LED glass. Tiny white LED lights are placed in between the layers of GuardShield[®] laminated glass, and power is emitted through the clear conductive coating on the surface of the glass, thus eliminating any wires, - It works like magic!

Not only do these lights make the glass floor an art piece, but also offers star light glow in the hallway below. These lights can be dimmed and programmed to do virtually anything you dream, - including linking with a TV to display moving images! For more details ask us on info@glasshape.net
